Budget cuts shrink financial aid

by Pam Lundberg
assistant news editor

Nearly 200,000 students nationwide could lose grants and another one million could get reduced grants during the 1990-91 academic year under the new federal college budget signed into law by President George Bush.

Members of the office of Financial Aid at Hope College feel that this probably won't affect students at Hope College much. This is because that Hope's students have a guaranteed amount of financial aid available. Statistics will not be given to Hope's financial aid office until late March or early April. Therefore, nothing definite will be decided until then.

The problem surrounding financial aid is basically caused by the fact that, although there was an increase in the Department of Education's budget, the inflation rate wiped out those funds. Another cause is the changes in the rules for Stafford Loans. This causes banks to drop out of this program. A House Appropriations Committee aide feels that another problem with financial aid is that "Although there are increases in the budget, there are more students applying for financial aid."

It is projected that the budget will force 192,000 students to lose their Pell Grants next school year. About one million more will have their Pell Grants reduced, while 12,000 students will lose supplemental Education Opportunity Grants, 16,000 Work Study Grants, 3,000 Perkins Student Loans and 3,000 students will be cut off from State Student Incentive Grants.

Congress appropriated $4.48 billion for Pell Grants, up from $4.42 billion last year. After Gramm-Rudman "sequester" cuts, however, the amount available for the three million students who get Pell Grants this year will be a little less than last year. Last year's budget, moreover, was not enough.

Last spring, education groups warned that budget losses would soon force schools to stop giving students the maximum amount of money they could get in Pell Grants for this school year.

The main worry now is that the same thing will happen for next school year, especially for students from middle-income families who need the grants. The shortage "clearly has continued (continued on page 3)
Knight Foundation gives Hope challenge grant

(HOLLAND) - The expanding faculty development program at Hope College has received support through a $250,000 challenge grant awarded by the Knight Foundation of Akron, Ohio.

The grant will underwrite a comprehensive program developed by Hope College to strengthen the four-year liberal arts institution as a community of Christian scholars.

Faculty development activities to be funded by the grant include introductory programs to assist new faculty in gaining a strong start as scholar-teachers or teaching artists. The college will also establish Knight Fellowships to fund research activities of established teacher-scholars, and there will be funds aimed at revitalizing the teaching of veteran faculty.

The grant is part of nearly $2 million awarded to 13 private liberal arts colleges and universities from 11 states through the foundation's "Excellence in Undergraduate Education Program." All of the grants are challenge grants to be matched by the recipients. Participation in the program is by invitation.

"It was an honor for us to be invited to apply for a Knight Foundation grant, and an even greater honor to receive it," said Dr. John H. Jacobson, president of Hope College.

"An excellent faculty is a college's strongest asset," Jacobson said. "Our on-going faculty development program will be enhanced by this grant because it is helping to support the work of our faculty at various points in their careers."

The faculty development program will help the college's 15 to 20 new faculty each year by providing a week-long workshop in mid-August, and mentoring and other opportunities to interact with more experienced colleagues during the academic year. Funding will also be available to some of the new faculty for research and supplies.

Established members of the Hope faculty will be able to take advantage of five Knight Fellowships, to be offered annually beginning with the summer of 1990. The fellowships will support equipment, travel and supplies for summer research.

Faculty members will have an opportunity to evaluate and modify their teaching goals and methods through programs funded by the faculty development project.

The faculty development project will also allow faculty to examine ways to explore their disciplines relative to the Christian faith. Since its founding, Hope College has been affiliated with the Reformed Church in America.

Workshops will assist the faculty in teaching the college's senior seminar courses, which are designed to help students consider how the Christian faith can form a philosophy for living, understand secular values from a Christian perspective and articulate a personal philosophy for living.

Faculty members will attend annual college-sponsored conferences relating faith to scholarly disciplines relative to the Christian faith. Since its founding, Hope College has been affiliated with the Reformed Church in America.

The Foundation is wholly independent from Knight-Ridder Inc. but supports worthy causes and organizations in communities where Knight-Ridder has newspapers. It also makes selected national grants in journalism and other fields, in addition to the "Excellence in Undergraduate Education" grants.

The new grants range from $100,000 to $250,000 each. They bring to almost $5 million the total value of awards made by the Knight Foundation.

Ventriloquist to perform at Siblings' Weekend

by Msine Okisaka

A campus premiere of "Batman," a theater painting, Carnival night and a men's basketball game are all planned for this week's Siblings' Weekend.

"Batman" will run in Graves Hall Friday and Saturday at 7:00, 9:30 and midnight. Admission is $2 and a $1 raffle will be held for several "Batman" prizes. "Batman" is one of the highlights of Siblings' Weekend.

Siblings' Weekend is a weekend designated for Hope College students to invite younger brothers and sisters to Hope for a campus visit.

Several events are planned for this weekend. In addition to "Batman," there will be a T-shirt painting in the Kletz at 1 p.m. on Saturday. T-shirts and paint will be provided for students and siblings to make their own personalized t-shirts.

Also there will be a men's basketball game between Hope and Alma College at the Civic Center at 7 p.m. The free tickets for this game can be picked up from Jane Holmen in the Dow before 5 p.m. Friday. Van shuttles to and from the game will be leaving from and returning to DeWitt Circle.

The Carnival night in the Kletz is one of the major events scheduled for Siblings' Weekend. From 8 p.m. to midnight Saturday, there will be video game and various carnival-type games in the Kletz. For added fun, ventriloquist James Wedgewood will provide additional entertainment. Batman and the Joker will also be dropping by the Kletz. Although most of the games are free, money will need to be played in the video game tournaments and to purchase food.

In addition to these events, siblings can get into the Dow free on Friday or Sunday when accompanied by students.

SAC premieres "Batman"

by Pam Lundberg

During Siblings Weekend, this week, "Batman" makes its Hope College premiere courtesy of the Student Activities Films Committee.

Along with the movie, there will be a raffle at each showing. For an extra dollar raffle tickets will be sold. "Batman" pins, posters and t-shirts will be raffled off. On Sunday there will also be a Grand Prize drawing for "Batman" lithographs.

On campus, Saturday and Sunday, Batman and the Joker will make a guest appearance.

The SAC movie committee was able to bring "Batman" to Hope by ordering it. It cost $900, about $200 more than a regular first-run movie. SAC is excited and feels that the money spent will prove to be very worthwhile.
Consumers Power gives land for science

(HOLLAND) - By providing a living laboratory for area science instruction, land made accessible by Consumers Power Company for use in area science education will help the Kellogg Science Education Program at Hope College achieve its goal of improving science instruction.

The Consumers Power Company Campbell Biological Field Station will be a 175-acre section of the company's J. H. Campbell Generating Complex north of Holland along the Pigeon River, in Port Sheldon Township. When opened to area schools and colleges later this year, the land will be used for field trips, study and research.

The company's examinations of the J. H. Campbell site have identified 335 plant species and 150 species of birds. Other forms of wildlife and the miniature ecological systems found on the land will also be subjects for study.

The facility will benefit the Kellogg program both directly and indirectly, according to David Zwart, coordinator of the Kellogg Science Education program. "By being available to area schools, the station will promote the program's intent to improve science education locally," he said. "The field station will also be used by the program itself as it teaches science experiments and instructional methods to current and future educators."

The facility will be worked into the program's science education curriculum, including summer seminars offered to area teachers. Area teachers not involved with the program also will be able to learn how to use the site, during workshops planned for later this year.

Zwart explained that the idea of making the land available for educational and research purposes was initiated by Consumers Power employees at the J. H. Campbell Complex.

At the time, college lobbyists in Washington, D.C., while disappointed the president was advocating slight cuts in most campus programs, seemed almost relieved Bush had dropped President Reagan's efforts to make drastic cuts. The trend seems to be toward eliminating or reducing the budgets for National Direct Student Loans, College Work-Study, Pell Grants, Stafford Loans and Middle Income Student Assistance funds, among others. The 1989-90 budget continues that pattern, though it includes a few small-print items that could adversely affect students.

Since the government lowered the subsidy it grants banks, banks may threaten to stop lending money because of the lower allowance. "Some banks in the program have already dropped out," said the Consumer Banking Association's Fritz Elmendorf. "If the cuts go further or the temporary cuts become permanent, it could be a big blow. This could be the straw that breaks the camel's back."

sequence for the budget submitted next year. There is the possibility that the maximum (Pell Grant) award will be reduced in the future." Becky Timmon of the American Council on Education warned.

There is the possibility that the budget could cause a small reduction in grants," conceded Tom Skelly of the Education Department.

The higher education budget losses are blamed on the government's unwillingness to raise taxes to get the money to fund the programs.

The budget contains no major college programs, and is not dramatically different from the budget Bush first proposed at the start of the appropriations process last February.

Consumers Power gives land for science

(HOLLAND) - By providing a living laboratory for area science instruction, land made accessible by Consumers Power Company for use in area science education will help the Kellogg Science Education Program at Hope College achieve its goal of improving science instruction.

The Consumers Power Company Campbell Biological Field Station will be a 175-acre section of the company's J. H. Hope junior earns U.S. Marines award

( HOPE )- Hope College junior Elliott Church of Traverse City has been named the 1989 Commandant’s Trophy recipient by the U.S. Marine Corps. Church was selected for the honor from approximately 600 participants nationwide by achieving the highest overall average in Platoon Leaders’ Class (PLC)-senior, a demanding, six-week U.S. Marine Corps officer candidate class.

“Out of the hundreds of highly motivated competitors at PLC-senior, Elliott finished with the highest overall average in the testing of three areas: leadership, academics and physical fitness,” said Captain Steven Wasilewski.

“Also, twice during the six-week course, all candidates are asked to rate their peers on who has best exhibited the leadership required of a Marine officer. Wasilewski said: “Elliott’s fellow candidates have personally told me that he won hands down. There was never any doubt who was in charge and who was in the lead. He is a very fine young man.”

Platoon Leaders’ Class was instituted in the late 1930s as a means of increasing the number of commissioned officers in the U.S. Marine Corps, supplementing those commissioned through the U.S. Naval Academy and the Naval ROTC Scholarship Program. Today 70 percent of all U.S. Marine Corps officers enter through PLC.

Three Hope alums produce wound treatment film

( HOPE )- An instructional video tape on tissue injuries that will be used by medical schools and physicians throughout the country has been produced by Theodore Nielsen, Guy VanderJagt, Professor of Communication at Hope College, and two Hope alumni.

“Management of Common Soft Tissue Injuries” was produced for the International Society of Plastic and Reconstructive Surgeons. The 30-minute program was released in October by the Educational Television Service of the Biomedical Communication Division of the Southern Illinois University School of Medicine.

The program was produced for television by Nielsen, directed by Gary P. Kirchner, a 1977 Hope College graduate and director of the Educational Television Division, with lighting by Mark Verduin, a 1987 Hope graduate. The executive producer was Robert Russell, M.D., professor of plastic and reconstructive surgery at the Southern Illinois University School of Medicine. Nielsen and Kirchner wrote the script for the program, which is the second in a series produced by Russell, Kirchner and Nielsen. The first, “Basic Techniques of Wound Closure,” was released in 1985.

“A patient’s success or failure to obtain uncomplicated healing is in a large part determined by the quality of care and decisions made by the primary care physician.”

The program consists of two six-week officer training courses that college undergraduates take during the summer: PLC-junior and PLC-senior. Successful candidates are offered commissions as U.S. Marine Corps officers upon receipt of their Bachelor of Science degree.

Church participated in the PLC-senior class in Quantico, Va., during June and July, and had completed PLC-junior during the summer of 1988.

“The program was very rigorous—changing physically, emotionally and mentally,” Church said. “I was mainly pleased to have graduated but to receive the award was an honor indeed.”

Two trophies commemorating Church’s accomplishments were presented by Brigadier General (retired) Robert R. Saison, currently president of Supernus Corporation, at ceremonies held at Hope College on December 7. One trophy is Church’s to keep, and the other will be displayed at Hope until next year’s honoree is selected.

“I’m very proud of Elliott and I think that his friends, teachers and classmates at Hope College should also be very proud of his achievement,” said Dr. John H. Jacobson, president of Hope College.

“I’m very proud of Elliott and I think that his friends, teachers and classmates at Hope College should also be very proud of his achievement,” said Dr. John H. Jacobson, president of Hope College.

Church is the son of Dr. and Mrs. William Church, 734 Sassafras, Traverse City. He is a 1985 graduate of Traverse City High School.

Dr. James Gentile, dean for natural sciences, has been named one of the managing editors of the international journal “Mutation Research.” Gentile will head a section of the publication and serve as co-managing editor with Dr. Sheila Galloway of Merk Sharpe and Dohme Research Laboratories.

Hope receives Skillman grant

Hope College is among sixteen Michigan private colleges to receive part of an $880,000 grant given to the Michigan Colleges Foundation by the Skillman Foundation.

University of Michigan School of Medicine.

Nielsen and Kirchner wrote the script for the program, which is the second in a series produced by Russell, Kirchner and Nielsen. The first, “Basic Techniques of Wound Closure,” was released in 1985.

The aim of the most recent program is to introduce medical students and physicians to the treatment of the common trauma wounds of lacerations, abrasions and punctures of the soft tissues of the body. “Management of Common Soft Tissue Injuries” will be utilized by medical schools throughout the United States as well as primary care physicians in postgraduate medical education.

“Although generally not emphasized in medical school training, these injuries comprise the third most frequently seen problem faced by physicians,” notes the programs narrative. “A patient’s success or failure to obtain uncomplicated healing is in a large part determined by the quality of care and decisions made by the primary care physician.”

Examples of wound treatment were videotaped during a three and one half year time period at St. John’s and Memorial Hospitals in Springfield, Ill, for inclusion in the program. The program includes sections on proper patient and wound evaluation, identification of common skin and soft tissue wound types, explanation of wound healing biology, tools and techniques used for optimal wound care, and approaches to post operative care.

The Educational Television Division, headed by Kirchner, serves as a production center for not only medical television, but for television projects that range from “People of Faith for Foster Care,” targeted to church congregations, to health-related segments for Walt Disney Productions.
WTHS gears up for spring with changes

by Greta J. Kennedy
staff writer

As WTHS enters another semester, the station's committee plans an entire new set of ideas and goals that they hope to put into effect. At the end of last semester, many of the students on the executive committee outlined their ambitions for the upcoming term and came up with many exciting ideas.

Shawn Jacob, director of promotions, spoke about new programs that the station is offering.

"We hope to begin to do more live broadcasts at various locations on the campus," commented Jacob. "We are also working with Phelps cafeteria and are planning live programs there. For example, next week Wednesday (January 17) we are having a beach bash during the dinner hours. There will be beach oriented food, music, and contests. It should be a lot of fun."

Jacob also hopes to do more live broadcasts at other locations. For example, he would like to have a set-up in a dorm during a study break so that the students in the dorm could participate.

"This is a way we can get the people on the campus more involved in the station," adds Jacob.

Jacobo wants to expose the students through weekly tent announcements upcoming events with the station. He also hopes to do remote broadcasts throughout the community in order to receive more community support.

Reed Brown, administrative director, also added his ideas for change during the upcoming semester.

"Our biggest change will be in the area of news," said Brown. "We are no longer able to use the on-line service. Right now we have no reliable source for news. We plan to go with access to a national network. We will use the national news six times a day. The news staff will, in turn, produce the local newscast. It will be more campus oriented, using their own resources."

Sam Vollmer, news and sports manager, is now developing a regular short program that is issue related. It will be a news analysis, drawing on expertise from the campus.

For anyone interested in becoming part of the news team, there will be a seven week seminar worth one credit through the communication department, starting Thursday, Jan. 18. The students will learn how to research, write and report the news for radio.

As a music director at the station, Chris Lambert's biggest goal for the semester is to improve the sound quality of the programs. He also wants to do more integration of blues, jazz, reggae and house music during the programs, developing emphasis tracks. This involves playing at least two new groups every hour, to encourage more variety.

Lambert also would like to increase more contacts with record labels, especially the smaller ones, to get a greater variety of music.

"We are striving for 'professional amateurism,'" says Lambert. "This place is really growing, both with the equipment and the quality of the d.j.'s. As we have greater ability, the more we will improve."

More changes that are taking place involve the time slots. The prime-time slots have been moved from 5-8 p.m. to 4-7 p.m., which has been found to be the primary "driving time." They have also moved around specialties, such as talk shows, the topics of which will be announced each morning as an informational aid to the listener.

"We are finally breaking the progressive image," asserts Stacia West, general manager of the station. "We are trying to show the campus that this is their station. We are also trying to start a reputation - if you want to get things, go to WTHS."

Her personal goals for the station include a suggestion box, to receive more input from the students. She also hopes to begin producing recordings of important speakers that have appeared on campus during the community hour.

"I've found the people like what we're doing," adds West. "We aren't going to interrupt with commercials and we will give you the variety you can't get at any other station because we aren't told what to play."

Last semester, the station did an extensive survey of the listening audience and are waiting for the results to be compiled.

"This survey will have a definite impact on the way the station is run," said Brown. "We will make decisions that reflect what the students want. Because we are non-commercial, we also can more easily cater to serve various need of the student."

With Macintosh you can even do this:

Macintosh* computers have always been easy to use. But they've never been this easy to own. Presenting The Macintosh Sale. Through January 31, you can save hundreds of dollars on a variety of Apple* Macintosh computers and peripherals. So now there's no reason to settle for an ordinary PC. With The Macintosh Sale, you can wind up with much more of a computer. Without spending a lot more money.

Technology brings change to the future

CPS -- The Year is 2000, and you've just entered your college campus. You'll have school bag in one hand and your computer in the other. You'll be picking up your class schedule, buying books and checking out your dorm room. You can't even leave your dorm room to do it, however. You'll be able to do all of these things by using various electronic gadgets at your fingertips.

And once classes start, you'll probably be able to view some of your lectures on your room monitor. Need to do some research? With your computer, you'll be able to scan the campus catalogue at your library, or for that matter almost any library in the world.

American campuses in general will be populated by more minority, and older students who, in turn, force more of the mundane tasks of attending school taken care of by technology. Various observers predicted when asked to envision what college life will be like at the start of the new millennium, no, 10 years away.

"Technology is going to be serving students in ways we can't even conceive of now," said Martha Church, president of Hood College in Maryland.

Some of the conceivable innovations include satellite technology for interactive lectures and seminars, and fiber optic cable wiring that lets schools relay video, audio and data into dorm rooms, said Paul Bowen, a mass communications professor at Buena Vista College in Iowa. "A student in a dorm ought to be able to access databases anywhere in the world," Church prophesied. "We won't have to keep expanding libraries just because of high usage," she added.

Just how such changes will affect students is open to question.

At already-wired Mansfield University in Pennsylvania, for example, vice president for student affairs Joseph Maresco, found that the lure of in-room technology has turned more students into "room rats" who have forsaken normal campus social life.

Most college observers nevertheless see the wiring of campuses continuing unabated, regardless of the effect on students' personal development.

Soon students, even will be able to get their financial aid processed electronically.

"What we're going to see is more done by computer-aided procedures" with push-button telephones and computer terminals, predicted Dallas Martin, head of the National Association of Student Financial Aid Administrators, headquartered in Washington D.C., "We're going to get rid of the paperwork.

The other big change in higher education will be the makeup of its students, both in terms of cultural backgrounds and of age.

One reason the average age on campus will rise is that today's students will have to return to college in the future just to keep abreast of scientific knowledge which is growing at an exponential rate," Church said.

"Incredible technological changes are just a decade away," predicted Martha Church, president of Hood College in Maryland.

Changing demographics will determine the makeup of tomorrow's classroom, and colleges will have to come up with new programs to serve the needs of future students.

Other areas will also be affected:

Enrollment:
The Department of Education, in a December study titled "Projections of Education Statistics to 2000," predicts enrollment will fluctuate during the 1990s, but ultimately will increase from 12.8 million in 1988 to 13.4 million by century's end.

A 1988 College Board report predicted that half of the nation's college population will be made up of students who are at least 25 years old, who often have jobs and families. Ten years ago, observers anticipated enrollment would crash during the 1980s, wreaking havoc on campuses and forcing as many as 200 schools to close. The influx of nontraditional students already serves to keep the crash from occurring.

By the mid-1990s, blacks and Hispanics will make up a third of the traditional college-age population, and most schools are expecting a corresponding frac
tion to enroll in college.

Increasing minority enrollment, of course, has been on nearly everyone's agenda, but efforts haven't always been successful. Last January, the American Council on Education (ACE) a college presidents' trade group in Washington, D.C., discovered black male enrollment had actually fallen from 470,000 students in 1976 to 436,000 in 1986.

Tuition:
Come 2007, tuition at private universities will average $46,515 a year. Research Associates of Washington predicts public research university tuition will be $7,715 per year, while public four-year college tuition will average $6,132 for a year.

Faculty:
While some campuses already are smarting from a lack of professors, a Princeton University report released in September warned colleges will suffer another shortage of at least 6,800 professors by 2000.

The Education Dept. thinks the number of faculty will increase by 4 percent, from 741,000 in 1986 to 771,000 in 2000. Perhaps out of necessity, Church predicts, "We'll see an enlarged arena of people who belong in academia including people with backgrounds in government and industry.

And, she adds, "We need to be especially diligent about what's missing most minority faculty."

Other:
In its look at the beginning of the next century, the Education Dept. predicts more women will earn doctoral degrees for the first time. Women will continue to earn many associate's and bachelor's degrees and master's degrees as men do.

The department also has forecast that higher education spending will rise 24 percent, from $115 billion to $144.4 billion.

DINNER FANTASIA
Tickets will go on sale Friday, January 19th in DeWitt Lobby.

Sales will run from 9:00 a.m. - 5:00 p.m. ($40.00 per couple)

You will need your HOPE COLLEGE I.D. to purchase your ticket. Only one ticket per student.

As in the past, we will NOT be taking tickets for the dance only. Tickets will be checked at the door. Security measures will be taken to prevent those without tickets from entering. We ask for your cooperation in this matter.

Thank You,

SAC Committee

Ph. 396-2915
President initiates scholar program

(HOLLAND) - A four-part lecture series at Hope College entitled "What Can One Know in One's Heart: Is Religious Experience Evidence for Religious Belief?" will open on Thursday, Jan. 18.

The lecture, entitled "A Brief History of the Dispute," is the first to be given as part of the new Scholar in Residence Program at Hope College, and will take place at 11 a.m. in Winants Auditorium of Graves Hall. The Public is invited, and admission is free.

Dr. Keith E. Yandell, professor of philosophy and of South Asian Studies at the University of Wisconsin-Madison, will be the first Scholar in Residence, serving as Philosopher in Residence.

Dr. John H. Jacobson, president of Hope College, initiated the Scholar in Residence Program. "The purpose of this program is to bring to the Hope College campus for a full semester distinguished scholars in several disciplines in which Hope offers undergraduate majors," Jacobson said. "The intellectual and professional stimulation that can be provided by these distinguished visitors is of great potential benefit, both to our faculty and to our students as they make plans for attending graduate school or pursuing careers."

While on campus the scholars will have the opportunity to teach a course, deliver several lectures and meet informally with Hope students and faculty. Yandell's visit is being coordinated by Dr. Arthur Jentz, chair of the philosophy department at Hope.

In his lecture series Yandell will discuss the many ways people claim to "know" God. He will examine the claims people make about their religious experience, claims which people say are "evidence" for believing in God and for knowing God's nature and purposes. The lecture series will conclude with Yandell's assessment of the state of the evidence for religious belief.

While on campus Yandell will also be teaching a course through both the philosophy and religion departments entitled "Hume's Philosophy of Religion."

Yandell has written several articles, books and textbooks on the philosophy of religion, including "Hume's Inexplicable Mystery: His Views on Religion" (1989), "Christianity and Philosophy" (1984) and "Basic Issues in the Philosophy of Religion" (1971).

Yandell is also a member of the American Philosophical Association, the Society of Christian Philosophers and the Hume Society. He has been a member of the faculty at the University of Wisconsin-Madison since 1966.

Yandell's other three lectures will be "The Religious Data: Experience East and West," on Thursday, Feb. 15; "The Principle of Experiential Evidence," on Thursday, March 8; and "The State of Evidence: The Question Answered," on Thursday, April 5.

The Black River drains into Lake Macatawa. Is water all that is draining? Is "Lake Macatoilet" deserved? Next issue find out as the anchor examines lake pollution.

To anyone interested in BROADCAST JOURNALISM and possibly working on the WTHS NEWS and SPORTS STAFF:

WTHS will be holding a series of seminars starting Thursday, Jan. 18 at 8 p.m.

If you choose to attend, one credit will be granted towards graduation.

For more information call Sam at WTHS (X7878 or X7880).
Editorial

anchor undergoes change

In keeping with the tradition of change for the ’90s, the anchor has been in a state of transition during the past two years. Hopefully this has also meant an improvement in the quality of the anchor, and its coverage of events of the college community.

Over the past year and a half, the anchor has undergone several staff changes as many members of the staff are now in Washington D.C. for the honors semester. Because of this, Steve Kaukonen has taken over the job of ad manager and Rochelle Anderson assumes the reins of sports editor. Bill Meengs has moved up to assistant editor. Jim Monnett is now editor in chief. This is keeping with the recent staff changes over the past two years which have seen the staff increase 100 percent.

The anchor accepts advertising from student organizations, Holland businesses and other outside sources, but reserves the right refuse advertising.

The anchor will also continue to accept classified advertising, as long as space allows. These ads cost 25 cents and are due by Sunday at 7:00 p.m. These ads must contain a name and phone number for verification, and no obscenity, however subtle, will be printed.

Letters to the editor are welcomed by Sunday 7 p.m. These are an opportunity to sound off about the anchor, or any other issue.

All letters must be signed, though names will be withheld upon request. Also, due to space limitations, the anchor reserves the right to edit any letter over 250 words.

Few issues over the past semester generated as much outcry as the switch to the gender aware term of freshperson. The anchor received letters from students, professors, and, other concerned parties. Though a couple letters expressed approval of the term, the majority were against the switch. Even some members of the anchor staff didn’t like the change.

So why continue with “freshperson” this semester? Because a change to a gender aware term is at the forefront of college journalism throughout the whole country.

Though “freshperson” is awkward and unfamiliar to many people it reflects a gender awareness that the anchor endorses. Alternatives considered and rejected included “freshmore” (Indiana University), “freshmon” (the University of Wisconsin-Madison), “1st year” (Northwestern University) and “frosh.” To maintain stylistic consistency the anchor will continue to use “freshperson” until a better alternative is found. All input on this issue is appreciated.

Amid the many letters about “freshperson” and sexism, the anchor was surprised by the lack of argument and discussion for the switch. Committee Report, the homeless, and other controversial subjects. Though freshperson is a term for first year students, it reflects a gender awareness that the anchor endorses.

So why continue with “freshperson” this semester? Because a change to a gender aware term is at the forefront of college journalism throughout the whole country.

Anchor is a product of student effort and is funded through the Hope College Student Congress Appropriations Committee. Letters to the editor are encouraged, though due to space limitations, those of 250 words or less will be given preference. The opinions addressed in the editorial are solely those of the editorial board. Subscriptions to the anchor are available for $18 a year or $10 a semester. We reserve the right to accept or reject any advertising.

Dear Editor,

In my years here at Hope College I have had the pleasure of enjoying your commitment to intellectually stimulating, unbiased reporting. Upon my completion of the previous issue, December 6, 1989, I fell a swelling desire from within to respond to your cutting edge journalism.

According to the overall tone of the paper, I find I must regard myself as out of step with my peers. You see, I consider myself a conservative Greek heterosexual male. Using the anchor’s criteria I am a selfinterested elitist bent on suppressing individual liberty abroad while simultaneously dominating women and bashing homosexuals here at home.

In conclusion I would like to thank you for helping me realize my own inadequacies and setting the record straight regarding deficient world views.

Cordially,

Thomas Conrad Glass

SAC thanks moviegoers

Dear Editor,

We on the SAC Film Committee would like to thank all the moviegoers this weekend for their patience and understanding. We would also like to apologize for the technical difficulties during “Dead Poet’s Society.” A bulb burned out in one of the main projectors forcing the use of a back-up projector. For this we apologize. This situation is only temporary and should be remedied by next weekend for the campus premire of “Dead Poet’s Society.” A bulb burned out in one of the main projectors forcing the use of a back-up projector. Thans again for your patience, Britt Lindfors

SAC Film Committee Chair
Life was simpler then

Ann Schloff
guest columnist

Milk. Have you ever noticed how many different kinds of milk there are these days? There’s 1 percent, 2 percent, powdered, whole, strawberry, chocolate, and eggnog! Skim. Why do we need to have so many different kinds of milk?

I can remember the good old days when the only kind of milk we could get was bottled on plastic one-gallon jugs with a red cap screwed on the top. That was the milk around the house, the only milk around. We called it "Red Top." Red top was the only kind of milk my brothers and I knew existed until one day, my mom brought home something new. I can’t still remember that night. It was a typical evening. My brothers and I were gathered around the kitchen table, watching my mom go through the final preparations for dinner and pour the milk. She finished filling my cream colored mug and as I prepared to take my usual pre-dinner sip, I noticed something was wrong.

"What is this?" (Only a first grader could be so bold as to criticize a meal prepared by a mom unaided by her children.)

"What do you mean 'what is this?'"

"Mom, this milk is blue."

My mother’s only response was to tell me it was just my imagination, but I knew this was not red top. My cream colored mug usually contained an equally creamy colored milk but this milk had a bluish hue to it. My older brothers soon caught on to what was happening and added their comments.

"Yes, this is definitely not red top, Dad. I think this is chalk mixed with water." Always leave it to my brothers to think of something that brilliant.

"Well, do you think we should try it?"

"I’m not gonna try it, you try it." (Yes, Mikey from the Life cereal commercial lives in all children.)

So we tried the blue milk and like most little kids, we hated it because it was weird. But Mom said that we had to drink it because it was healthier. Sometimes she would try to trick us into thinking we were drinking red top by switching the caps on the milk jugs. You see, not only did they change the contents of red top, they also changed the color of the cap.

Now we could buy purple top, green top, pink top, brown top and blue top too. Needless to say, when asked to ride my bike over to the gas station to pick up a gallon of milk, I was amazed at the display of color in the milk cooler.

I think the days of red top have become a Utopia to which we will never return. Life seemed simpler back then. We had one kind of milk (red top), one favorite sandwich (peanut butter and jelly) and the best things in life were the prizes inside cereal boxes.

mean, think of the possibilities instead of howitzers we could have soldiers manning peaives and Bases. Instead of beating a country into submission with shells and bombs, you could do it with the new Scorpions' album.

So far, this method seems to work well. I've even had some personal experience with it. Every spring on the first warm day, my housemates and I wait for women to come out and get an early start on their suntans. Then we turn the stereo up loud (careful not to point the speakers out the window, since that's illegal here at Hope) and put on Queen's "Fascinations Girls." It's really pretty funny to see how fast they run back inside. I can see the Beatles' "Revolution" and "Back in the USSR" are likely going to be number 1 hits over there in a few weeks, if the United States' methods become popular. I don't think John and Paul had this in mind when they wrote those songs, they were probably thinking of Nike shoes, right?
Minority recruiter joins admissions

Darryl Davis has joined the Admissions staff as an interim minority student recruiter. Davis is a 1989 Calvin College graduate.

by Carrie Maples
news editor

The new face in the Admissions Office these days is Darryl Davis, the interim minority student recruiter who replaced Tyrone Jordan in November. Davis says his position is temporary as he was hired after Jordan’s sudden departure and that a broader search will be conducted for the fall of 1990.

“This is an opportunity for me to earn some money and figure out where I want to go next,” said Davis of his reasoning for accepting a temporary position. He may apply for the position for next year but that’s still undecided.

Davis said the job deals mainly with recruiting minority students from the Detroit, Grand Rapids and Muskegon areas. As Davis is from Grand Rapids, he feels this adds to his knowledge of the problems and decisions faced by minority students. Davis graduated from Calvin College in July 1989 and finds things very similar here.

One of Davis’ goals for his year here is to inform the Admissions staff about what it takes to recruit minority students. “They need to know what’s going on. They need to know more about what it takes to recruit a minority student because, where it might take 50 percent effort to recruit a white student, it will take 75 percent effort to recruit a minority student. So there’s an extra mile involved.”

Davis’ goals also include an effort to “help the school meet its goal of becoming more multicultural by helping faculty and the Administration understand what it’s like to be a minority student at a majority school and the needs of a minority student.” He also hopes to get to know the majority students on campus.

“I’ve sampled virtually all of the areas of communications,” he said of past experiences. “I am a communications person who is opinionated and I voice that opinion.” He believes in an exchange of ideas.

Davis has a bachelor’s in communications from Calvin and is planning to go on to graduate school to get his master’s in theatre. He would like to teach at the college level while waiting to break into the film industry.

Davis is currently looking at graduate schools and hopes to find the school with the best programs. He’ll be spending vacation time visiting different colleges but he feels there is “too much rush” right now to enroll for the fall of ’90.

Davis spoke Monday at a reception honoring Martin Luther King, Jr.

Who’s Federal-Mogul? We might just be your best career choice. Federal-Mogul Corporation is a multi-national, Fortune 500 company which manufactures and distributes a wide variety of precision parts for the general industrial, aerospace, farm, construction, truck and automotive industries, as well as for replacement markets.

If you’re a team player who likes to lead the way with innovative thinking, we’re looking for you. Our open management style encourages your ideas, and gives you the opportunity to shape the future.

We’re coming to your campus on February 1, 1990, so that you can discover the many career opportunities now available at Federal-Mogul. Visit your College Placement office for more information.

Entry-level positions are available in a wide range of fields, including ENGINEERING, SALES, MARKETING, DISTRIBUTION AND MANUFACTURING.

Join the team that provides competitive salaries, excellent benefits, and the opportunity for advancement. If you’re graduating, discover Federal-Mogul.

An Equal Opportunity, Affirmative Action Employer.
Cottage life provides a unique alternative in

by Scott A. Kaukonen
consulting editor

Cottage life, a unique aspect of the Hope College housing scene, provides a comfortable, homey atmosphere often with close-knit housemates, as well as a sense of independence. This was a repeated theme of “anonymous interviews with residents of Centurian Cottage on 13th Street and VanDrezer Cottage on 14th Street.

For a couple of years now, rumors have floated about campus concerning possibly replacing a number of houses with a new dorm to handle the increased enrollment and to offset the high costs of maintaining the cottages. But reactions by cottage residents to such proposals seem clear.

Kristen Strand of VanDrezer gave her support to the cottages and pointed out that “it keeps up the close-knit atmosphere of the dorms,” said VanDrezer resident Amy Brandt. Added housemate Carolyn McCrudy, “It fosters a sense of community.”

Residents of both cottages agreed that the atmosphere was much more relaxed. Brubaker began to compare it to the atmosphere of a Dykstra cluster, where seven of their ten residents lived last year. “It’s the same kind of feeling but not as intense,” concluded McCrudy.

There are a number of logistical and physical advantages to the cottages. Matt Voekel pointed out that there is more room, especially than a dorm even an apartment. Bigger bedrooms? Kirsty Arthur of VanDrezer said “Yes,” but housemate McCrudy responded “Speak for yourself.”

VanDrezer has ten. Her housemate, Erika Brubaker agreed. “We wanted to have more independence and still maintain college housing.”

The residents of Centurian and VanDrezer saw a number of advantages to their situation. Ron Hubbert of Centurian spoke of dorms as being too impersonal.

“You don’t get to know the guys as well,” he said.

“Personal” the cottages are not.

“You’re living with who you want, not the random placement of the dorms,” said VanDrezer resident Amy Brandt. Added housemate Carolyn McCrudy, “It fosters a sense of community.”

Residents of both cottages agreed that the atmosphere was much more relaxed. Brubaker began to compare it to the atmosphere of a Dykstra cluster, where seven of their ten residents lived last year. “It’s the same kind of feeling but not as intense,” concluded McCrudy.

There are a number of logistical and physical advantages to the cottages. Matt Voekel pointed out that there is more room, especially than a dorm even an apartment. Bigger bedrooms? Kirsty Arthur of VanDrezer said “Yes,” but housemate McCrudy responded “Speak for yourself.”

VanDrezer resident assistant of Centurian and former resident of Kollen Hall, added that in the dorms “there is no way to get away from people. There is more privacy in a cottage.”

Brubaker added, “You don’t have to worry about everyone knowing everything you do.”

The cottages come complete with a kitchen including a full size refrigerator, oven, sink, counter and cupboard space. But most residents remain on the meal plan. Strand stated an advantage for cottages was the ability to “cook (your own food) when you’re really, really sick of Phelps.” Usually it’s macaroni and cheese, spaghetti or peanut butter in VanDrezer.

Access to cable TV and better ratios of people to bathrooms were also mentioned as benefits. Residents of these cottages spend much of their free time together whether in fraternity events for the Centurians, the “good quality time—movies, dinner,” referred to by Reimer or a cottage date night hosted by VanDrezer. While cottages hang together by varying degrees, both of these cottages found that often they would do things not as a whole, but as sub-units with always a few doing something together.

Kirsty Arthur has found the quieter cottage atmosphere to be “more conducive to studying, though,” she admitted, “you are more easily distracted.”

Each cottage has its own individual characteristics. The VanDrezer residents felt, as expressed by Brandt, that they had the “ultimate advantage—our own porch.”

Since the Centurian Cottage is home to many fraternity events such as an open house during homecoming, residents often find themselves visited by alumni and fraternity brothers who come to the fraternity meeting held in the house.

Cottages are not without their disadvantages. Both cottages complained of having to keep the heat turned high to offset the poor insulation of the older houses. The thin walls in VanDrezer also create a sound problem for Arthur who lives in the room next to the foyer.

“You don’t know what is going on as much and you don’t meet as many new people,” according to Strand. Cleaning up is another disadvantage. Both cottages have assigned cleaning strategies though Centurian does not have a “fine” policy as does VanDrezer for failure to perform one’s chores. Shoveling the snow is among the least favorite chores in VanDrezer.

Another weak point of the houses is the phones. With ten women and only two phones in VanDrezer, it isn’t always easy to get a line.

One person’s advantage is another person’s disadvantage. A strong sense of community and independence相冲突，使得一些居民对宿舍表示怀疑。Brubaker也同意了这种观点。“我们想要更多的独立性，”他说。“我们不想在宿舍里养成依赖性。”

Access to cable TV and better ratios of people to bathrooms were also mentioned as benefits. Residents of these cottages spend much of their free time together whether in fraternity events for the Centurians, the “good quality time—movies, dinner,” referred to by Reimer or a cottage date night hosted by VanDrezer. Shoveling the snow is among the least favorite chores in VanDrezer.

Another weak point of the houses is the phones. With ten women and only two phones in VanDrezer, it isn’t always easy to get a line.

One person’s advantage is another person’s disadvantage. Location is a prime example. Since most of the cottages are located on the fringes of campus, location may be fine for those in VanDrezer who make frequent use of Lubbers and Phelps. But for basketball player Julie Shensky, its distance from the Dow is inconvenient.

There are 40 cottages, houses owned by the college, most of which lay on the edges of the campus. They vary in size. Centurian has seven residents while VanDrezer has ten.
Spielberg's romantic film "Always" soars on a wing and a prayer

by Bill Meengs
assistant editor

In the fantasy tradition of "E.T.," Steven Spielberg offers another wonderful story with his latest film "Always." The film is the story of a fire pilot who dies while saving his best friend, and is given the chance to be the inspiration for another pilot. The story gets complicated when a sort of love triangle is formed.

Richard Dreyfuss plays the character of Pete, a fire pilot who flies by the seat of his pants. Pete dies when his plane explodes after he had helped to put out a fire on his best friend Al's (John Goodman) plane. After his death, Pete is allowed to come back in spirit to help inspire another young fire pilot Ted Baker. Baker eventually falls for Drinda, who is portrayed in an excellent job by Holly Hunter. The problem is that Drinda was also Pete's love interest.

The main problem of the movie is for Pete to come to grips with the fact that he had lived his life, and needed to release Drinda so she could live hers. "Always" is a delightful movie if taken for what it is, a fantasy story. Anyone who goes to this show expecting a realistic story is going to be disappointed.

Dreyfuss is often funny, showing the fine romantic lead skills that he portrayed in "The Goodbye Girl." Hunter brings her grief and healing to life showing a different type of character than her "Broadcast News" role.

Tying the movie together, Pete and Drinda's best friend, John Goodman, in the role of Al, Goodman's role is important because he adds comic relief to what would otherwise be a sad picture.

As it is though, it still is a sad picture. The movie leaves you with a warm feeling as you walk out of the theater. Though it has some faults in the plot, on a scale of 1-10, "Always" rates a solid 8.

Korean pianist plays chapel

Hi Moon in concert on Friday, Jan. 19 at 8 p.m. in Dimnent Memorial Chapel in the second in its Artist Piano Series.

The program will include works by Beethoven, Albeniz and Schubert.

The event is also being offered as a special bonus concert for subscribers to the college's Great Performance Series.

In addition to having played extensively throughout Europe and the United States, Moon has appeared with the Tokyo, Osaka and Seoul Philharmonic Orchestras and the Korean National Orchestra. She graduated with top honors from the Vienna Academy, where she studied with Dieter Weber.

Her outstanding list of honors includes first prize in the 1983 New York International Piano Competition, the 1984 American Music Competition, the 1985 Menuhin Competition in the United Kingdom, the 1986 New Jersey State Piano Competition and the 1987 Yehudi Menuhin International Competition. She is a native of Holland.

Hope teams break competition

by Rochelle Anderson
sports editor

The Hope men and women's basketball teams continued their winning ways over the Christmas break.

In the Kwanian Classic on Dec. 21-22, 1989, the Dutchmen defeated Ohio Northern by the score of 67-47. Wade Gugino was the high scorer with 20 points. Hope then defeated Heidelberg, Ohio with a score of 81-74. With 30 points, Eric Elliott was the high scorer.

After Christmas, Hope hosted the Russ Devette Invitational on Dec. 29-30, 1989. This is the third year that Hope College has hosted a holiday tournament. The Flying Dutchmen were the defending champions.

Hope's first game was against Dordt whom they defeated 99-74. Hope had been winless in three previous meetings with Dordt. Hope lost in the final round to Grand Rapids Baptist by the score of 64-65, breaking their ten game winning streak.

The tournament has been named in honor of Russ Devette, professor emeritus of physical education at Hope and longtime coach of several sports including basketball.

The Flying Dutchmen played Northwood on Saturday, Jan. 6 on their home court and defeated them by the score of 91-83. Elliott and Gugino both had the high score of 18 and Gugino pulled down nine rebounds to lead the team.

The tournament took to the road for their first Michigan Intercollegiate Athletic Association game at Albion on Wednesday, Jan. 10. They defeated the Britons 83-79 with 711 attending. Senior Colly Carlson led the team in rebounding with nine and senior Eric Elliott had the high score with 24.

The Flying Dutchmen trounced Olivet at Olivet this past Saturday, Jan. 13. By the score of 118-80. This is the most points scored by a Hope team since 1985. The game marked the third hundredth game under coach Glenn Van Wieren. Hope had eight players in double figures and are now 13-1.

Also continuing their winning ways over break were the Flying Dutch. The Hope women are off to their best start in history. No Hope women's team had ever opened the season with more than four consecutive victories. The best previous start at this point in the season came in 1983-84 when the team won eight of their first nine games including a five game winning streak.

Over Christmas break, the Flying Dutch competed in the Case Western Invitationals in Cleveland, Ohio. On Dec. 29-30, 1989, the women defeated John Carroll University 69-60 with co-captain Dina Disney leading her team in scoring with twelve points.

Also in that tournament, the Flying Dutch defeated Case Western, Ohio by the score of 73-54. This time Lissa Nienhaus led the team in scoring with eleven points.

Opening their MIAA season in Albion, the Dutch were victorious, winning by the score of 86-39. Junior Robin Schout was the leading scorer with sixteen points and senior Anna Marie Postmus led the team grabbing nine rebounds.

Back at home, the women's team defeated Olivet 72-56 last Saturday Jan. 13. Co-captains Dina Disney and Holly Vandenberg led the team in scoring with sixteen points each. The team is now undefeated 10-0.

The swimming teams were not scheduled for any meets over the break, but both the men's and women's teams defeated Adrian this past Saturday, Jan. 13 at the Dow Center. The men were victorious with a score of 154-43 and the women's score was 127-82.

Women's tennis is ranked sixth

(HOPE) - The Hope College women's tennis team is ranked sixth in the nation in a pre-season poll of National Collegiate Athletic Association Division III colleges.

The poll was conducted by the Intercollegiate Tennis Coaches Association.

Hope has qualified for the Division II national tournament each of the past three years. The Flying Dutch have also been champions of the Michigan Intercollegiate Athletic Association (MIAA) each of those years.

The top-ranked team is defending Division III national champion California-San Diego. The senior Dani Zurchauer of Holland (Okemos HS) is ranked 17th in the nation among Division III singles players. Zurchauer has a three-year singles record at Hope of 57-10. She was 19-4 last year and qualified for the Divi-
nion III national tournament in both singles and doubles play.

The top ranked Division III player is Karyn Cooper of Wellesley, Mass., who was the Division III national runnerup last spring.

The Flying Dutch are coached by Kathy Van Tubbergen.

COACHES' PRE-SEASON POLL

1.) California-San Diego
2.) University of South, TN
3.) Pomona-Pitzer, CA
4.) Trenton State, NJ

ZENITH INNOVATES AGAIN — WITH THE NEW Z-286 LP — THE AT COMPATIBLE THAT TRANSPORTS YOUR BUSINESS INTO THE FUTURE!

If your business needs AT power now, but could use advanced MS-OS/2* performance in the future, then you really need the new Z-286 LP Desktop PC from Zenith Data Systems — today's leading supplier of high-speed AT compatibles.*

As the one desktop computer that can keep pace with your company's growing data processing requirements, the Zenith Data Systems Z-286 LP lets you harness 286 speed and power in a surprisingly compact design that'll only take up as much space on your desk as most monitors.

You'll find the new Z-286 LP compatible with thousands of AT peripherals...and virtually all MS-DOS** software. But that's not all. The Z-286 LP also gives you the capability to move up to the new MS-OS/2 technology whenever you feel your business is ready for more advanced performance.

The Zenith Data Systems Z-286 LP also comes complete with 1MB RAM — expandable to 6MB without using an expansion slot. Plus a single 3.5" 1.44MB floppy disk drive that lets you "read and write" 720K floppy disks. And a last 10MB hard disk to handle your heavy-duty word processing, large spreadsheets and huge databases for thousands of pages of information. Plus, the Z-286 LP comes standard with one parallel and two serial ports for peripheral devices.

So transport your business through time with the one desktop computer that can keep up with you. Get the Zenith Data Systems Z-286 LP today. And start thinking like a true innovator!
