Hope College Students dealing with reality of diabetes

Melanie Loquist

Staff reporter

Jordia Dykstra (02) always wanted to be an astronaut.

He’d even gone to space camp twice. Then, in sixth grade he was diagnosed with Type 1 Diabetes. Unfortunately for Jordia, the potential complications of diabetes make it impossible for him to pilot an aircraft.

“Diabetes has never been a big deal for me. But flying is the one thing you can’t do,” Dykstra said. It’s a computer science and music major. “The FAA won’t let you fly because there are too many health hazards for you and your passengers. Your sugars can go too high or too low. And no one knows exactly what would happen to you in space.”

Type 1 Diabetes is a chronic disease where the body fails to produce insulin, which is needed to breakdown glucose. If a diabetic’s blood sugar level is too high over a period of years, they can develop severe complications, such as blindness, circulatory problems and kidney and heart disease.

Diabetics inject themselves daily with insulin to break down the glucose in their body.

If a diabetic’s blood sugar level is too low, from too much insulin, they can pass out and even die. Therefore, diabetics must regulate their blood sugar level by checking it several times a day, exercising regularly, and watching what they eat.

“I probably don’t take as good care of it as I did in high school. I don’t know if it’s because my parents aren’t here to remind me or I’m lazy or I don’t have time,” Dykstra said.

Dykstra’s maintenance plan includes eating at about the same time every day, visiting an endocrinologist (a diabetes specialist) annually, checking his blood sugar level once or twice per day and giving himself insulin shots twice a day.

When Dykstra’s blood sugar drops, he eats something to counteract the insulin.

“I can tell when my blood sugar is getting low so I know when to eat something. I keep LENDING LIFE: Emily Precious (’95) donates blood for the American Red Cross Blood Program Tuesday at Main Auditorium. The blood drive was held between 1:30 and 7:30 p.m. Hope hosts the Red Cross program several times throughout the year.

A person can donate blood once every 56 days. After giving blood, Hope students were treated to pizza and snacks by the American Red Cross.
Marathon to benefit kids

kate van krimpen ad representative

Some Hope students may need a new pair of shoes on March 11 after they dance the night away for a good cause.

On Friday, March 10, Hope College students will begin a 24-hour Dance Marathon at 7 p.m. to raise money for the Children’s Miracle Network at DeVos Hospital in Grand Rapids. The event will take place in the Donn Center.

There is a $400 entry fee for a dancer to participate, and all of the money raised will go to children at the DeVos Hospital. On Feb. 10, committees will find out how many dancers will be participating.

“Different organizations and halls are sponsoring dancers,” said Elizabeth Wilson ’03, who is on the morale committee. “Several fundraising activities are taking place on campus, such as the Valentine’s Day flower sale.”

There will also be a Bowling Day at Northern Lanes on Feb. 10. Money that is made between 9 p.m. and midnight will go toward the Dance Marathon.

Biochem prof. wins award

CARRIE ARNOLD campusbeat editor

When biochemistry professor Dr. M. Burnatskwa-Hledin began her current research project, she did not know that it would lead to an award from the Dreyfous Foundation.

The Henry Dreyfous Teacher-Scholar Award is a $60,000 grant for a professor who, early in his or her career, shows excellence in both research and teaching at the undergraduate level.

“I’m just very happy,” Hledin said. In order to be eligible for this award, Hledin had to be a tenured professor and have letters of recommendation from both the heads of the Departments of Biology and Chemistry.

She also had to have support outside of Hope College.

Her project, which involves the cellular receptor VACM-1, began in earnest seven years ago, when Hledin and her research group cloned the gene for this protein. It binds a hormone, which regulates water absorption in kidney cells. Since VACM-1 is more similar to proteins that regulate cellular signaling, Hledin hopes to discover the mechanisms through which VACM-1 interacts with other vasoconstrictor receptors, as well as those involved in cellular signaling.

“We are trying to see how the receptor we cloned regulates the cell cycle,” Hledin said. “We want to see how it regulates cellular signaling and permeability and how it relates to water reabsorption in the kidney.”

Her research, which has been published in such journals as “Journal of Clinical Investigation,” “Toxicology,” and “The American Journal of Kidney Disorders,” was presented last summer at a national conference in San Francisco, and will be presented again this summer in San Diego.

The Dreyfous Award will help support student involvement in Hledin’s research. Hledin has five students working in her lab each semester, and four to eight students doing research during the summer months.

She has also received a grant from the National Institutes of Health. Hledin received her bachelor’s, master’s, and doctoral degrees from McGill University in Ontario, Canada. Before coming to Hope, she was also an associate professor of physiology at Michigan State University.

More information about Hope’s Dance Marathon is available at http://www.hope.edu/marathon/.

THE HEIFER PROJECT

$3,400 has already been raised to meet Hope College’s $5000 goal in efforts to help underprivileged families all over the world! Let’s meet the goal together!

What you should know

CAARE: Campus Assault Awareness and Rape Education. Meetings are available for presentations on sexual assault prevention. They can also direct victims to appropriate campus resources.

Campus Extension: 7800

Counseling Center: Offers free services by appointment and can provide information on Hope’s Sexual Harassment Policy.

Campus Extension: 7945

Advocates: Persons appointed by the President and nominated by members of the campus community. An advocate represents either a complainant or alleged assailant. Students can also choose an advocate.

A list of advocates is available through the Counseling Center.

JANE BAST
instructor editor

Sexual assault is something students would rather forget as they head to Wednesday morning classes and Friday evening parties. But after an alleged sexual assault was reported in the Jan. 17 Anchor, the topic has been stirring Hope students and faculty in the past few days.

"It was shocking. I wasn’t prepared for it," said Christine Trih (’06). CAARE (Campus Assault Awareness and Rape Education) Educator and Co-President of the Women’s Issues Organization. "It reinforces the fact that people really don’t know what’s happening on campus.

"The alleged incident, which caught some students by surprise, detailed an alleged assault that occurred after a party in early October.

The victim accused several fraternity members of raping her while she was incapacitated.

"The girl obviously got herself into a situation she couldn’t handle," said Andy Buchner (’03).

"What I wonder is how drunk the guys were. They were obviously wrong to do such things terrible and if they were in control of themselves, that’s even worse.

Perhaps the largest assumption being made on campus is that the accused are guilty.

"I haven’t heard both sides of the story," said Brian Dryhurst (’00). "We heard her side of the story, but don’t even know her name. Everybody’s laying blame and we don’t even know what exactly went on. We shouldn’t point fingers until we get the facts.

Several people worry that the issue will be ignored by the students.

"I think [cases of sexual assault] are swept under the rug in every situation which only makes it worse," said Meredith Akins (’00).

Trinh echoed Akins sentiment, but feels the fault lies in student’s misconceptions.

"Sexual assault is very much an issue at Hope, but it doesn’t get much attention because it’s under-reported," Trinh said. "A lot of people want to believe Hope is a protected environment.

Professor of Psychology Jane Dickie feels such statements are an unfortunate misconception.

"People may think that things are swept under the rug. People may think that things are being made on campus is that the accused are guilty.

"I think the individual made the wrong choice to get into a situation she couldn’t handle," said Andy Buchner (’03).

"I know in fact that they are dealt with properly," Trinh said.

"CAARE as an organization does a lot to educate the campus," Trinh said. "No one wants to hear bad news, so they don’t listen.

Despite lack of answers, some students are getting the message.

"The football team attended an hour-long session on sexual assault," said football player Randy Arway (’03). "It helped inform, but of course they could do more.

Akins witnessed a self-defense class in Gilmore Hall.

"I think we need to make it seem like it’s real at Hope College," Akins said.

The lack of knowledge about Hope policy as effected even the educated.

"I know it’s an issue everywhere," Arway said. "I just don’t know enough about it here."
A voice gone blank

It would be nice if the Anchor had never run a huge, blank space on the editorial page before. It would be nice if the Anchor had, in its 113-year history, always had loads of letters to the editor, ready to fill the waiting pages. But that's not the truth.

In actuality, the Anchor ran a blank editorial page on Sept. 18, 1996, when Jodi McFarland ('97) was editor-in-chief. The 1996 issue described the apathetic state of the Hope College campus, detailing the lack of voice exercised around the country. The issue also described the apparent idea that the campus is content with nothing to complain about.

It would be easy for the 2000 version of the Anchor to support these same ideas, and in copying the 1996 issue, it is. It would also be easy for the Anchor to plop a full page advertisement in that space, simply waiting a week to see if those letters started to file in.

But that doesn't seem to be a solution. The easy solution is to point the finger at the readers, claiming that their apathy is hurting the newspaper. But there comes a point when a newspaper, especially the Anchor, must look in the mirror and wonder if it is doing its job.

Has the Anchor staff done its job in creating intrigue, creating conversation and digging up the appropriate news stories? The Anchor staff could easily say it has been, but if zero letters have been submitted, then that answer isn't so clear.

That still doesn't excuse the fact that almost 3,000 students don't feel compelled to write letters to the editor. Neither do the hundreds of faculty, staff or administration, or the thousands of the Hope community. Regardless of how whiny an editor is, how controversial or boring a story is, the editorial page should be used as a constructive outlet for ideas. The writers' job isn't to write letters, though.

The editorial page will remain a forum for the Anchor's readers. But only as long as it's used.

It would have been nice if the Anchor never had to run a blank editorial page.
**DIABETES from 1**

**FRISBEE from 1**

Powers echoed her idea of finding a solution to balance preserving the game and safety.

"I'm not trying to eliminate Frisbee golf," Powers said. "That's not a feasible solution.

Powers' suggestions for making Frisbee golf a safer activity are varied. One method would be the limiting of certain devices to be used during the game. The hours between 8 a.m. and 5 p.m. on weekdays are the prime hours when there is a great deal of foot traffic on the course that could potentially receive injury from Frisbee golf.

Joel Toppen, professor of Political Science and Frisbee golfer, supports the limitation of Frisbee golf during work hours.

"If students ask me to play, I won't play until after 5," said Toppen. "Otherwise you have to stand around and wait." And Powers' suggestions would alter the course, to eliminate holes where there have been injuries and have high potential for more injuries.

Especially targeted would be holes where there is limited sight to the Frisbee golfer would be thrown. The starting hole of the north of De Witt and heading toward the lamp post outside of Lubbers is regarded as the most dangerous location on the course.

"It's a very dangerous hole," Powers said. "The Lubbers end of campus has increasing traffic. There are too many walkways on this side." Safety on the De Witt stairs hole is in large part an issue of assureing a line of sight for the Frisbee golfers to throw along.

"At the very least, you should send someone to the top of the steps," Toppen said. "You should never throw a Frisbee when you can't see where it's going." Insomnia and stress among Hope's Frisbee golfers appears as an important part of any solution.

"There needs to be an ethic of respect," said Kopchick. "That should be enough. It's a matter of respect." Powers also raised the possibility of putting signs at each Frisbee golf hole which would list rules and safety requirements of the game.

"This would be the most long lasting solution and permanent solution to the game," Powers said. "But no everyone feels that a clear establishment of a course on campus is a good idea." Part of the beauty of the Frisbee golf course is its informality. "This is a very informal sport. It's been handed down. I would hate to take that away."

There are also objections to questions of the game's safety among student who play on Hope's campus.

"I can see the safety concerns," said Kopchick. "I've almost hit a couple people, and I've had some friends get hit. But when you're walking through campus, you know that people are out there playing, so you try to keep your eye on the ball and not run into people." Kopchick suggested that the current state of Frisbee golf is safe enough.

"There are a few holes where you have to be careful and be aware of where you're throwing," Kopchick said. "As long as you yell 'fore' then people know it's coming." Objections were also raised to limitations on the time available for play as well as changes in the course structure.

"I don't think we need to tell Frisbee golfers what time to play," Kopchick said. "People know that the golfers are coming into the school, don't think people would like a changed course. It's a great institution at Hope. Everyone knows it, why change it? There's no need to change what we've already got." The question of how to implement changes surfaced as one of the key barriers to change.

"If the administration were to say 'you can't play this hole,' who's going to stop somebody? Kopchick said. "I'm just throwing a Frisbee from point A to point B. Who's going to enforce these rules? Public Safety.

The sense among those concerned is that is any solution needs input from both students and faculty.

"Ideally the solution would be something that should be adopted by the people who play," said Toppen. "Anything the school's doing going to need to include the Frisbee golfers. If not, people would completely ignore it. The changes would be much more effective if they were simply adopted by the players themselves, not handed down as an order from the authorities."

**ISOCEROPATHIC LEANINGS**

Andrew Lotz

**Everything I need to know I learned at Hope College**

Having a roommate you hate during your freshman year can be harder than you think, especially if he gets his mom to come and yell at you. No matter how many polls are taken, no matter how many glowing endorsements and name brands, cafeteria food is still cafeteria food. Rainbow cookies get cooler as you get older. Don't ever ask your roommate where the stains on the floor came from; you don't want to know.

Hockey games are amazing, and even more amazing are the insults that students think up to yell at the opposing team. A toilet in an apartment with five guys needs to be shaved. Turning your underwear inside out is one of the highest forms of art. Another week, Duces of Hazard is on television two times a week. Repetition is fun. If you go out to Phelps and realize you're in a Tupperware container if you can't remember what's in it just throw it out. Go to any lecture hall with an empty parking car after you've found a good parking spot. Walking around campus on stilts attracts women. Smoking is more painful than it looks, and probably does not attract women. Everyone, every guy, gets rided up over some big issue; only to forget about it entirely come May. You can actually become a bond with someone by talking about the cartoons of your childhood: if Thunderrats and the Smurfs don't work, try Fern. There is nothing to fear but bionic rats. Life is easier if you simply don't care about the horrible, terrible opinion of your roommates. When the trash mound gets taller than your roommate, it's time for it to be taken out. Repetition is funny. Lists of advice learned in college are only written by people who can't think of a column that week. Once a guy gets a girlfriend, he's never the same. Some people are cursed with the ability to actually enjoy Dave Matthews. A box of Jell-O for hours on end. The truly valuable people in your life are the ones who don't rush to fill the silences in a conversation. Red heads are the most beautiful people every Ramen are over-rated. I don't care if you're going to get 200 in a dollar, they're awful. The only one who really is listening is yourself, and even then it's questionable. Watch out for snakes. If you leave plain bagels out long enough, they eventually become blueberry bagels. The proper response to the word 'cluster' is a shiver, even if it is referring to a bomb or a breakfast cereal. Re-run of Night Fader can be more appealing than work I cannot fly, no matter how hard I try. Truly one of the greatest patterns in God is if you're tired, sleep. If your roommate is tired, turn on all the lights and stay up typing until 3 a.m. The only time you should feel forced to smile is for photographs. Repetition is funny. When you remember something that's "hey, the fable on fire," take it seriously. Cookie Monster will never cease being hilarious. When you begin to doubt yourself remember that in the long run, whatever you're doing really doesn't matter. Always wash the produce. Even though it's always worse off than you, so quit complaining.

"I don't want to hide the fact that I have diabetes," Jackson said. "I like to open up about it so people can ask me about it."

About once a week, Jackson deals with permanent solution and low blood sugar level which can cause slurred speech, shakes, mood changes, and even hallucinations. "I don't have my share of low blood sugar times," Jackson said. "I usually notice the signs so it's not too bad. I've gone to the emergency room twice, while at Hope." Meghan Breeden ('03) visited the hospital a few weeks ago because of the complications she had with her diabetes when she had the flu.

"It was an adjustment coming to college," Breeden said. "I have a lot of stress I didn't have at home that effects my sugar. That stress makes me have more severe highs and lows."

For years, Breeden's doctors in management, and determination from the context of the college.

"College life may make their diabetes more complicated to manage because stress, change in diet and sleep patterns, and increased exposure to illness all have an impact on the management of insulin depen-

sulin pump, which automatically delivers insulin every hour. Breeden, who was diagnosed with diabetes when she was 18, was fi-

nally convinced of the advantages of such a device and has been at-

tending meetings since August to prepare for the insulin pump she will have inserted on June 5.

"I'll give it a lot more flexibility," Breeden said. "Right now, my four shots per day are supposed to be at specific times. Last semester was really hard with my schedule. This will help with control and will bring my blood sugar averages down."

Both Breeden and Jackson stress that there should be good things that have come out of their experiences with diabetes. Breeden says she learned discipline, stress man-

agement, and determination from her experiences. While Jackson says the disease brought her closer to God.
Parade of pigs set for Holland downtown

MATT COOK  intermission, editor

The streets of Holland will be decorated with something more than just tulips this summer. Residents and visitors to the city will be greeted by the site of artfully decorated, life-size pigs.

The Holland Area Arts Council, in conjunction with downtown Holland, has announced an event called "Pigs on Parade." Modeled on a similar display in Chicago involving cows, "Pigs on Parade" will feature several life-size pigs that have been painted and designed by local artists, and displayed in the downtown area.

"We thought it was a good idea for the community," said Kathy Morawski, development coordinator for the Holland Area Arts Council.

According to the project, it was not hard for the Arts Council to settle on the pig as their subject.

"We wanted to use an animal people would recognize. When we looked at the source where we bought the pigs, we became automatically attached to the pigs," Morawski said.

There are also some local tie-ins that helped influence the decision.

"The Dutch use a lot of pork, and there have been a lot of pigs farms in the area," Morawski said. However, there was one deciding factor that sealed the decision for the Arts Council.

"We just got attached to the little guy. He's so cute," Morawski said.

Unlike the cows of Chicago, which can be seen standing up or lying down, and in a variety of different positions, all the pigs will basically look the same, with one variation. There are some with their ears up, and some with their ears down.

"We are also feeding the pig to help influence the decision," Morawski said.

The design for painting each pig will be chosen from among the ideas that are expected to be submitted to the Arts Council.

"Several pigs will then be selected from among the submissions by a panel, which includes representatives from the Arts Council. The winning pigs will be painted and placed in the downtown Holland. Funding will come from sponsorship by Holland businesses.

"This partnership with the downtown office is important. They are the principal shopping district and we felt that they would have a better feel and understanding of that area," Morawski said.

Morawski feels that the event will be a success for the City of Holland.

"There's been a very positive reaction by the people and the artists," she said. "This will be big in the community because its whimsical spirit brings in a lot of interest." Morawski said. "There are some people interested in submitting a design that can call the Holland Area Arts Council at 396-3278.

WordSmiths: Kevin McIlvoy (left) and Charles Baxter will read from their work this Thursday.

Lamers described Baxter's writing as applicable to everyone.

"He is someone who is very talented at capturing the current events in life that we all know and relate to," she said. "But the way he does this is unique and sometimes surprising."

McIlvoy teaches at New Mexico State University and Warren Wilson College.

"In his most popular book "Hyslop," McIlvoy writes about the perspective of a Latino jailbird con artist and gives depth and meaning to this person's life," Lamers said. "McIlvoy is good at capturing details of someone's life that we might deem deviant."

Students are also invited to attend a question and answer panel titled "The Craft of Writing Fiction." The panel will take place at 3 p.m. in the Herrick Room of the DeWitt Center and provides students with an opportunity to meet and interact with the writers.

"Students should come with questions and comments on the writing," Lamers said. "They should not be intimidated by the writers but should know that the writers are eager to interact with them and help them in their own writing.

"I think the informal talk with the writers is everyone's favorite part of the Series," she said. "I myself find out so much and love how the panel is spontaneous and unexpected with a little bit of willingness."

SLICING ‘N DICING: Ryan Klingler (’01)
cuts through the Defiance defense on his way to a basket on Jan. 26. Klingler finished the game with 17 points.

Van Wieren said. “We need to hit on 
cylinders to be as good a team as we

can be to be a team as good as they are.

“We weren’t hitting on all cylinders
tonight consistently enough to be 

emerging and win a game like this.”

Kyle Vanderwall (’01) led Hope with 
19 points, including 5-9 from three–point range. Ryan Klingler (’01) had 17 points and eight 
rebounds, and Overbeek added 16 points and nine rebounds.

“Donny had a pretty good night,” 
Van Wieren said. “This was as good 
a game as he’s played for us and it 
was scoring, rebounding, blocking 
shots.”

While Olivet led 37-33 at half-
time, the teams exchanged the lead nine times when a Klingler free throw and a Kyle Maas (’00) dunk gave Hope its first lead since early in the first half.

Craig Veldman (’01) sealed the 
win with two free throws with nine 
seconds left in the game. Klingler led Hope with 21 points, 11 rebounds and seven assists. Maas added 14 points and nine rebounds, and Veldman ended with 13 points.

Hope will travel to Albion the 
next night, before hosting Kalamazoo 
Calvin on Feb. 9.

After the Calvin win, Hope felt the 
next night to Oakland University 
8-5. Lack of emotion from the 
Hope team was a key factor in their 
loss to the
